## Context

During the group project, we worked with the scrum method, for both our own group and the grip on sound group. In this, we did daily or every other week stand-up organising. With our project group, we divided the project into 6 sprints of 2 weeks each. Each sprint, someone else has been the scrum master. I have been this during the 2nd sprint.

## Results

During the 2nd sprint, I was given the task of leading a daily stand-up. Asking how everyone is doing, what they did yesterday and what they are going to do today. I kept track of this using a Kanban board in [Trello](#) and updated the semester coach (Bardt van den Dennen) via [FeedPulse](#). During the [peer feedback](#), I received a lot of positive feedback on my role as scrum master.

In addition, there was a stand-up meeting every 2 weeks with the 'grip on sound' project group with the stakeholder (Dennis Kirsch). Here we got updates on other project groups such as smart-mobile and infrastructure that were working simultaneously on the same project.

## Conclusion

---

By using these standups, you had a clear picture of what other people in the project group were doing. And you can easily indicate if someone needs help. It is also a good time to discuss something with the whole group.

The stand-ups with the entire 'grip on sound' group were less useful. As like the other groups, we didn't have much to gain from the information we or they shared.

## Learning Outcomes

---

Learning outcome 7: Goal-oriented interaction

*By communicating with stakeholders and team members about the ICT assignment.*
