Context

In order to deconstruct the portfolio website, it is useful to use the C4 Model. This ensures that the structure can be visually explained at 4 different levels of detail.

Research Methods

Literature Study

Find contextual information, guidance and best practices.

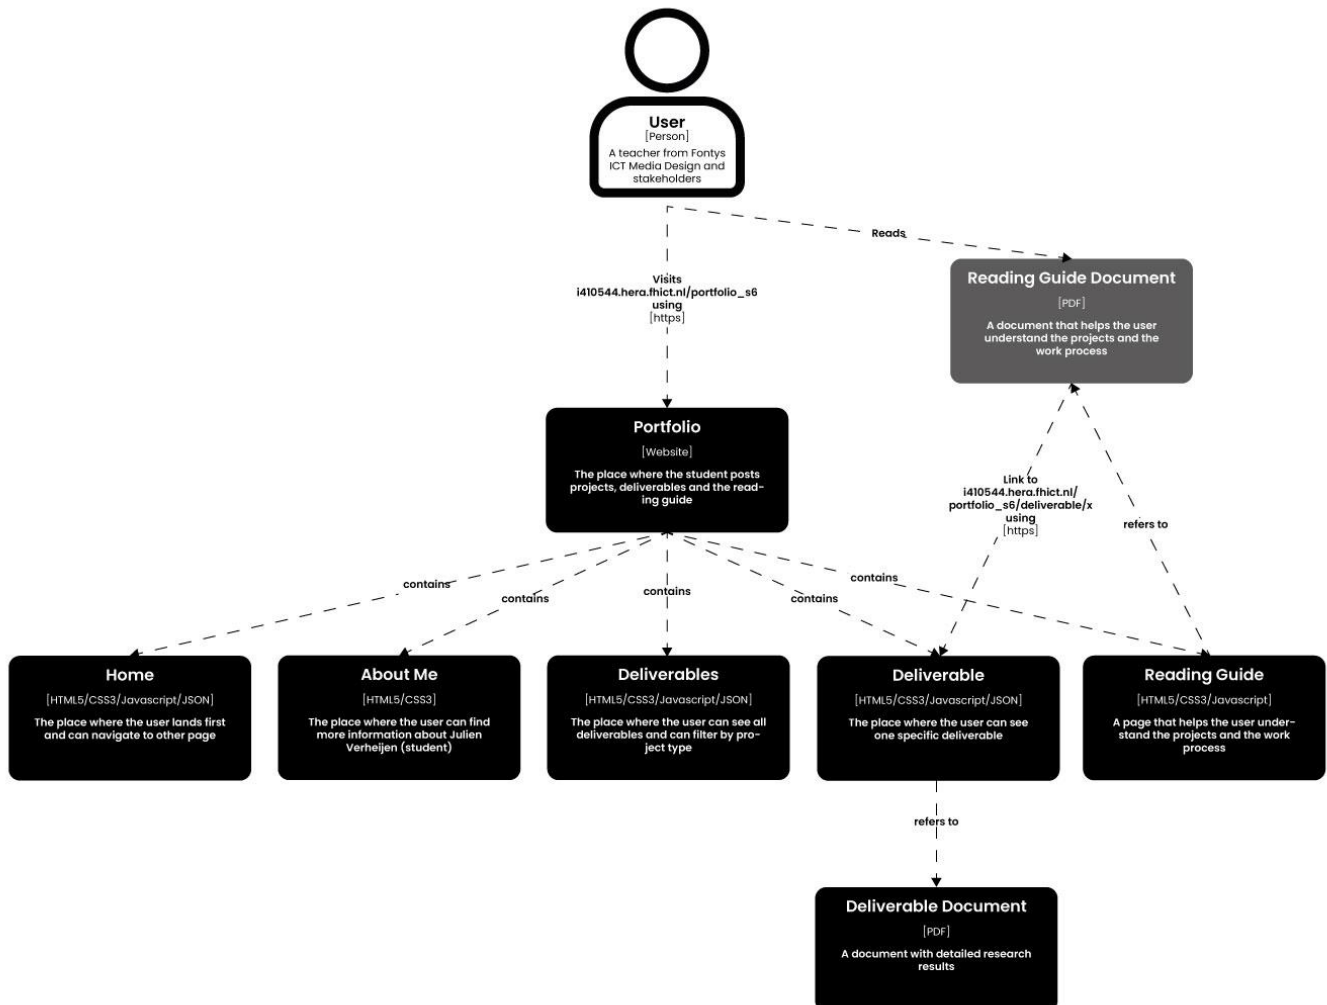

Peer Review

Colleagues and experts can help position and improve your work, certainly if it needs to be reused by them.

(CMD Methods et al., 2015)

Results

Because I have never worked with the c4 model before, I first researched for explanations on how to apply the model. I found a useful website by [Brown \(2022\)](#) after reading the texts and studying examples, I created my own variant for my portfolio.

Conclusion

With the first version, I went to Bardt van der Dennen to get feedback. This showed that the model looked fine for "level 2 - container". He only advised me to make the model in the original colours next time. However, after I told him that the colours on the sample website change randomly, it turned out that no official colour had been agreed. In other words, no feedback.

Learning Outcomes

Learning outcome 1: User interaction (analysis & advice)

By analysing the user and interactions.

Learning outcome 3: Software design and realisation

By designing a schematic representation of the software system.
